# TRI-POL 2021-2022 Dataset

## Technical Information

### 1. Citation, Research Team and Contact

#### Citation

This dataset is provided free of charge for all those who wish to use it. Designing this study, retrieving the data, cleaning it, and preparing it for public use meant a lot of work. We are therefore grateful for your acknowledgment of our efforts by citing the database when you use it. The suggested citation is the following:

## 2. Data Description

### Overview

The TRI-POL dataset is a micro-level online panel survey in five countries: Argentina, Chile, Italy, Portugal and Spain among their respective voting age population comprised of three waves carried out over a six-month period between late September 2021 and April 2022 (the detailed timing of each wave will be presented in Table 1). In addition, the project comprises a series of survey experiments, embedded in the different waves, regarding social exposure, polarization framing and social sorting. This dataset and project also includes variables based on tracking respondents behaviour collected by a passive meter using a software that the interviewees installed on their mobile devices.

The following protocol contains technical information concerning the online panel survey methodological approach.

### Files

5 Codebooks, one for each country (PDF files)

5 questionnaires in English (PDF files)

5 questionnaires in their respective main national language (PDF files)

5 TRI-POL integrated three-waves panel and experimental data in the five countries (Stata 17.0 files)

5 TRI-POL integrated three-waves panel and experimental data in the five countries merge with the passive meter data (Stata 17.0 files)

5 TRI-POL Behavioural data collected with Passive Meter (Stata 17.0 files)

### **3. General Sample Design of the Survey**

#### **Field**

National (Italy).

#### **Universe**

General population of more than 18 years, with the software to capture behaviour in internet installed, after consent, on one of its electronic devices.

#### **Sample size**

3346 interviews completed.

#### **Fieldwork**

Administrated by Netquest, a non-probabilistic panel.

#### **Sampling Method**

Non-probability quota sampling.

## Fieldwork Information

Performed between 23/09/2021 and 20/04/2022. Table 1 details the exact fieldwork period of each wave.

Table 1 Timing of the Waves

<b>Wave</b>	<b>Begin</b>	<b>End</b>	<b>Days</b>	<b>Gap</b>
Wave 1	23/09/2021	19/11/2021	58	n.a.
Wave 2	01/12/2021	08/01/2022	39	9
Wave 3	31/03/2022	20/04/2022	21	21
ALL WAVES	23/09/2021	20/04/2022	118	

*Source:* own elaboration.

*Notes:* Gap: number of days elapsed between the end date of the previous wave and the beginning of the current wave's interviews; n.a.: not applicable, as there was no previous wave.

## 4. Structure of the Sample

### Distribution of Shares

Table 2 shows the overall structure of the sample, disaggregated by wave. The upper panel shows the total number of invitations and disaggregates between those that are rejected and accepted.

Table 2 Structure of the Sample

Wave	Wave 1	Wave 2	Wave 3	Sum
Rejected and accepted invitations				
Invited	5922	1231	1116	8269
Rejected	2271	91	89	2451
Accepted	3651	1140	1027	5818
Participation rate	61.7%	92.6%	92.0%	70.4%
Discarded and completed interviews				
Accepted	3651	1140	1027	5818
Discarded	2420	24	28	2472
Declined	276	0	0	276
ISO unmet	19	5	12	36
Incomplete	1357	15	14	1386
Invalid	2	0	0	2
Closed	249	4	2	523
Quota full	517	0	0	517
Completed	1231	1116	999	3346
Completion rate	33.7%	97.9%	97.3%	57.5%

Source: own elaboration.

Accepted invitations constitute the starting point of the lower panel of the table, and are in turn disaggregated between interviews that are completed and those that are discarded on accounts of different criteria:

- a. *Declined participation*: a small fraction of those who had initially accepted the invitation (overall, less than 4.7%) declined to participate after learning the goals of the questionnaire or the institution responsible for the study.
- b. *ISO unmet*: some interviews (overall, 0,6% of those who had accepted to participate) were discarded because they failed to meet ISO quality standards. Participations are labelled as "ISO unmet" when they fail to meet at least one of the following criteria: 1) the information on gender or age provided in the survey is not consistent with the one previously available in the database; 2) the

response time is considered as fraudulent, i.e., the survey is completed in less than 20% of the estimated time; 3) the individuals failed to pass an attention check or 'trick' question.

- c. *Uncompleted interview*: a somewhat larger number of interviews (overall, 1386, i.e., 23.8% of those who had accepted to participate) were discarded because they were not fully completed.
- d. *Invalidated interview*: only 2 cases were discarded due to software issues (i.e. the program did not save the answers to some questions)
- e. *Closed*: discarded interviews (523 or 9% of those who had accepted to participate) was made up of those who completed the interview but did so only after the field had been closed.
- f. *Quota full*: finally, 517 interviews (8.9% of those who had accepted to participate) were discarded because the quota for a respondent's profile had been already filled.

The completion rate (i.e., the proportion of those who successfully completed the survey after accepting the invitation) ranges from 33.7% in the first wave to 97.9% in the second one, with an average of 57.5%.

## Attrition

The samples for individual waves range from 999 completed interviews in wave 3 to 1231 in wave 1. Attrition across waves is reported in Table 3.

The three waves were initially designed to be successively nested. The 1231 completed interviews in wave 1 is also the cumulative number of completed interviews at this stage. Wave 2 was effectively nested in wave 1. Therefore, all those who completed wave 2 (1116) had also completed wave 1. This means that 1116 is also the figure of *consecutively completed interviews* (i.e., of those who completed the current wave, in this case, wave 2, and the immediately previous wave, in this case, wave 1). Moreover, 1116 is also the number of *cumulatively completed interviews* (i.e., of those who completed the current wave and all the previous ones).

Again, wave 3 was effectively nested in wave 2, meaning that the number of completed interviews in wave 3 (999) is also the number of consecutively completed interviews at this stage and, given that wave 2 was in turn was nested in wave 1, it is also the number of cumulatively completed interviews.

Table 3 Wave Attrition

Wave	Wave 1	Wave 2	Wave 3
Completed	1231	1116	999
Consecutive completion	n.a.	1116	999
Immediate permanence rate	n.a.	90.7%	89.5%
Cumulative completion	1231	1116	999
Cumulative permanence rate	100.0%	90.70%	81.2%

Source: own elaboration.

Notes: Completed = accepted – (declined + ISO unmet + incomplete + invalid + closed + quota full).  
Immediate permanence rate = consecutive completion / completed. Cumulative permanence rate =  
cumulative completion / completed in wave 1. n.a.: not applicable.

## Quota Distribution

Sampling quotas were applied to ensure that the sample reflects the characteristics of the general population in terms of region of residency, gender, and age (the quotas were derived from Italian official statistics). Table 4 displays the main socio-demographic characteristics of the participants, by wave.

Table 4 Socio-Demographic Characteristics of the Participants, by Wave

Characteristics	Target	Wave 1	Wave 2	Wave 3

## 5. Coding, Naming, and Labelling Protocols

Information in the dataset follows a series of protocols to optimize the size of the database and to facilitate the users' access to and understanding of the information. The following subsections share the naming, labelling, and coding protocols employed in the TRI-POL database.

### Coding of Missing, Non-Response and Non-Applicable values

Uncertain responses (i.e. "don't know", "I prefer not to answer") have received special treatment. For starters, the surveys refrained for explicitly providing "decline to response" options. Instead, participants were allowed to skip the question. The use of "don't know" options was limited to knowledge questions. Finally, a pop-up alert was established to confirm no opinion responses.

The coding of non-response categories ("does not know", "does not answer", "does not apply / not applicable", "belongs to the control group of an experiment", and "not re-contacted in a given wave") has been standardised for all the questions in the database, so that each type of missing response receives a unique code throughout the database and that code is not used for any other purpose. Their labelling has followed equally systematic criteria. The coding and labelling protocols are as follows:

- Does not know: coded as **.a**, labelled as "[DK]".
- Does not answer: coded as **.b**, labelled as "[DA]".
- Does not apply: coded as **.c**, labelled as "[NA]".
- Belongs to the control group of an experiment: coded as **.y**, labelled as "[NA: control group]".
- Not re-contacted or refusal to participate in a given wave: codes as **.z**, labelled as "[NA: not in wave]".

## Protocol for Naming Variables

The variable naming is structured in three different parts:

- A prefix letter, indicating the group to which the variable belongs.
- The variable number.
- A suffix, indicating the wave to which the variable belongs.

First, **the prefix letter indicates the group** to which the variable belongs. The database distinguishes between five groups of non-experimental variables:

- **“g” = global** variables, which apply to all waves, such as the panellists’ unique identification numbers.
- **“s” = sociodemographic** variables.
- **“p” = all the other** opinion questions

The TRI-POL database also includes a series of experimental variables. All their prefixes start with “esm”:

- **“esm” = experimental variables.**

Second, **the numbers given to the variables in each group are organized in numerical order within each of the groups:** s1, s2, s3, s4, and so on for the “s” variables; p1, p2, p3, p4, and so on for the “p” variables, etcetera. Variables that are related receive the same number, plus a letter to differentiate them:

- **Lowercase letters are assigned in alphabetical order to differentiate among different variables pertaining to a battery of questions**, i.e., “p13a” (PD ideology), “p13b” (LeU ideology), “p13c” (M5S ideology), and so on. This convention is also applied to closely related questions, i.e., “s14” (belongs to a religion), “s14a” (religious denomination), “s14b” (church attendance).
- **An upper case “R” is added for recoded variables**, i.e., “s2R\_1” (age group).
- **An upper case “P” is added for all the post-experimental variables.**

Third and finally, **all the variables have a suffix whose number reflects the wave** of the panel to which that question belongs (“\_1”; “\_2”; “\_3”). The exception is the (few) global variables in the “g” group, which do not have any suffixes because they refer to the database as a whole instead of to any specific wave.

Taking all this into account, Table 5 displays some examples of variable names, also indicating their meaning and the group and wave to which they pertain. When adequate, a clarifying comment is also included:

Table 5 Examples of Variable Names (Non-Experimental Variables)

Variable	Meaning	Group	Wave	Comment
Standard non-experimental variables				
g1	Start time	“g”		
s1_1	Gender	“s”	1	
p1_2	Political interest	“p”	2	
Related variables (recoded)				
s2_3 s2R_3	Age Age group	“s”	3	Recoded variable

Source: own elaboration.

Table 6 displays examples of names of experimental (and post-experimental) variables, together with their meaning, group, and wave:

Table 6 Examples of Variable Names (Experimental Variables)

Variable	Meaning	Group	Wave	Comment
Experimental variables				
esmp1a_1	Twitter account	“esm”	1	Experiment 1
Experiments: post-experimental variables				
esmP12_1_IT_3	Neighbour preference	“esm”	3	Experiment 3

Source: own elaboration.

## Protocol for Labelling Variables

Variable labeling seeks a balance between being informative and not being excessively long. None of them includes abbreviations in the names (party labels instead of party names are used, though).

Given that the variables’ names all include information on the wave, this information is not repeated in the variables’ labels. Thus, for any given variable available in different waves, all the variable labels are the same. For instance, “s8\_1”, “s8\_2” and “s8\_3” are all labelled as “Employment status”.

## Protocol for Labelling Variable Values

Protocol of assignment of value labels to variables:

The assignment or not of value labels follows a precise protocol in the TRI-POL dataset.

1. *If a variable includes non-response categories, it will at least have a generic value label to clarify the meaning of those responses* (i.e., to clarify that .a means “does not know”). The most usual non-response categories are “does not know”, “does not apply”, and “does not answer”. This rule takes precedence over all the others, irrespective of the type of variable involved.
2. *Quantitative variables and scales of ten or more values have no value labels* (except if they include non-response categories). In particular, we have not assigned value labels to any variable for the sole sake of clarifying its polarity. Thus, instead of having a label informing only of the meaning of the two extremes of its eleven-point scale, "p18a\_2" (trust your family) has a note stating that 0 = “I don't trust them at all” and 10 = “Complete trust”.
3. *Ordinal variables always have value labels when each of the categories of the scale has a substantive meaning*. This is the case, for instance, of “p22a\_3” (talk about politics with family frequency). Its seven response categories all have a substantive meaning, so it has a value label spelling out those meanings (0 = “never”, 1 = “less than once a month”, 2 = “once a month”, and so on).
4. *Ordinal variables of six categories or less, nominal variables and binary variables always have value labels*, as information on the meaning of each response category of these variables is always necessary.

Variables of different waves share a common value label, instead of each one of them having their own, but identical, value labels. For instance, variables “s1\_1”, “s1\_2” and “s1\_3” (gender) share a common value label.

Variable-specific value labels take the name of the variables they refer to, but without the suffix indicating the wave. For instance, the common value label for the sex variables above is named simply as “s1”.

A considerable large fraction of the TRI\_POL dataset requires the same value labels. Instead of creating them many times with many different names, the following **generic label values** have been created to label “yes/no” responses, “agreement-disagreement” responses, and “does not know”, “does not apply” responses:

- “dkda” (.a = “[DK]”, .b = “[DA]”, .c = “[NA]”, .y = “[NA: control group]”, .z = “[NA: not in wave]”)
- “yndk” (1 = “Yes”, 2 = “No”, + “dkda” value labels)
- “nydk” (0 = “No”, 1 = “Yes”, + “dkda” value labels)
- “agree5ik” (1 = “Agree strongly”, 2 = “Somewhat agree”, 3 = “Neither agree nor disagree”, 4 = “Somewhat disagree”, 5 = “Disagree strongly”, + “dkda” value labels)

- “conk” (continues variables + “dkda” value labels)
- “con” (continues variables)
- “tenk” (scale 1 from 10 + “dkda” value labels)
- “ten” (scale 1 from 10)
- “hunk” (scale 0 from 100 + “dkda” value labels)
- “frequen4k” (1 = “Always”, 2 = “Most of the time”, 3 = “About half of the time”, 4 = “Occasionally”, 5 = “Never”, + “dkda” value labels)
- “L4k” (1 = “Completely”, 2 = “Somewhat”, 3 = “A little”, 4 = “Not at all”, + “dkda” value labels)
- “Import4k” (1 = “Very important”, 2 = “Important”, 3 = “Somewhat important”, 4 = “Not important at all”, + “dkda” value labels)
- “L8k” (0 = “Never”, 1 = “Less than once a month”, 2 = “Once a month”, 3 = “Several times a month”, 4 = “Once a week”, 5 = “Several times a week”, 7 = “Every day”, 8 = “Several times a day”, + “dkda” value labels)
- “L5k” (1 = “Never”, 2 = “Rarely”, 3 = “Sometimes”, 4 = “Often”, 5 = “Always”, + “dkda” value labels)
- “L6k” (0 = “Never”, 1 = “Less than once a month”, 2 = “Once a month”, 3 = “Several times a month”, 4 = “Once a week”, 5 = “Several times a week”, 6 = “Every day”, + “dkda” value labels)
- “L3k” (0 = “Never”, 1 = “Occasionally”, 2 = “Usually”, 3 = “Always”, + “dkda” value labels)
- “supportk” (0 = “Do not support any party”, 1 = “Support a different party than yours”, 2 = “Divide their support among different parties”, 3 = “Support the same party as you”, + “dkda” value labels)
- “frequen6k” (1 = “Every day or almost every day”, 2 = “Several days a week”, 3 = “Only on weekends”, 4 = “From time to time”, 5 = “Never or hardly ever”, 6 = “I don't follow these profiles”, + “dkda” value labels)
- “ability5k” (1 = “Not at all able”, 2 = “A little able”, 3 = “Quite able”, 4 = “Very able”, 5 = “Completely able”, + “dkda” value labels)
- “confident5k” (1 = “Not at all confident”, 2 = “A little confident”, 3 = “Quite confident”, 4 = “Very confident”, 5 = “Completely confident”, + “dkda” value labels)
- “free4k” (1 = “Not free”, 2 = “Somewhat free”, 3 = “Free”, 4 = “Very free”, + “dkda” value labels)
- “satisfactionk” (1 = “Not at all satisfied”, 2 = “Not very satisfied”, 3 = “Somewhat satisfied”, 4 = “Very satisfied”, + “dkda” value labels)

- “closek” (0 = “Not at all close”, 1 = “Not very close”, 2 = “Somewhat close”, 3 = “Very close”, + “dkda” value labels)
- “knowledgek” (1 = “true”, 2 = “false”, 777 = “Time used”, + “dkda” value labels)
- “problemsk” (1 = “The Pandemic”, 2 = “Unemployment”, 3 = “Drugs”, 4 = “The healthcare system”, 5 = “Housing”, 6 = “Education”, 8 = “International terrorism (Islamic State/ISIS)”, 9 = “Corruption”, 10 = “Immigration”, 11 = “Brexit and EU integration”, 12 = “Violence against women”, 13 = “Political instability”, 14 = “The refugee crisis”, 15 = “Climate change”, 16 = “Pensions”, 17 = “Citizen insecurity”, 18 = “Taxes”, 19 = “Parties and politicians in general”, 21 = “The economic situation”, 22 = “Other”, 23 = “L’evasione fiscale”, + “dkda” value labels)
- “quantk” (1 = “Not at all”, 2 = “Very little”, 3 = “To some extent”, 4 = “A fair amount”, 5 = “A great deal”, + “dkda” value labels)
- “regimek” (1 = “For people like me, one regime is the same as another”, 2 = “Under some circumstances, an authoritarian regime is preferable to a democratic system”, 3 = “Democracy is preferable to any other form of government”, + “dkda” value labels)
- “identifik” (1 = “Very much”, 2 = “Somewhat”, 3 = “A little”, 4 = “Not at all”, + “dkda” value labels)
- “device” (1 = “Desktop”, 2 = “Tablet”, 3 = “Mobile”)
- “country” (1 = “España”, 2 = “Argentina”, 3 = “Chile”, 4 = “Italia”, 5 = “Portugal”)
- “trackerk” (1 = “Only Desktop”, 2 = “Only Mobile”, 3 = “Desktop & Mobile”, 4 = “Inactive”, + “dkda” value labels)
- “zonek” (1 = “Area 1 (Piemonte, Val d'Aosta, Liguria, Lombardia)”, 2 = “Area 2 (Trentino-Alto Adige, Veneto, Friuli-Venezia Giulia, Emilia-Romagna)”, 3 = “Area 3 (Toscana, Umbria, Marche, Lazio, Sardegna)”, 4 = “Area 4 (Abruzzo, Molise, Puglia, Campania, Basilicata, Calabria, Sicilia)”, + “dkda” value labels)

- "alpha" alphanumeric
- "date" Date format
- "hour" Hour format

Notice that the "yndk", "nydk", "agree5ik" "frequen4k" "L4k" "Import4k" "L8k" and "L5k" generic value labels all include their own specific value labels plus those of the "dkda" generic value labels; for instance, the "yndk" also includes value labels to clarify that .a = "[DK]", .b = "[DA]", and so on.

## Naming and Labelling Language

Variable names, variable labels and value labels are all in English except when they refer to proper nouns, such as the names of regions (i.e., Piemonte) and politicians (i.e., Matteo Salvini) or the abbreviations of political parties' names (i.e., M5S, for Movimento 5 Stelle), which are maintained in Italian.

# Survey variables

## 6. Variable List

In this section, the complete list of non-behavioural variables available in the integrated dataset (i.e., of non-experimental survey variables retrieved in one or more of the three waves of the panel surveys as well as of experimental and post-experimental variables) is presented.

The list of variables is presented in tables, whereby the first column includes information on the variable names (when a variable is available in several waves, only the name of the first wave in which it appears is displayed), the second column displays the value label names (for all the variables that have value labels), the third column shows the variable labels (which clarify the contents of the variables), and columns four through six inform of the wave or waves in which each variable is available (a capital “X” in a variable \* wave cell indicates that the variable is available in the wave, and a blank space means that it is not).

To facilitate the navigation through the variable list, the information is presented in a series of tables, each of which referring to one group of variables: Table 7, list of “global” or “g” variables (with information on general characteristics of the dataset); Table 8, list of “wave” or “w” variables (interview’s characteristics in each wave); Table 9, list of “socio-demographic” or “s” variables (participants’ socio-demographic and socio-economic characteristics); Table 10, list of “opinion” and other “p” variables (broad range of opinions, attitudes, beliefs, evaluations, reported and intended behaviour of participants); Experimental Variables

**¡Error! La autoreferencia al marcador no es válida.** shows the experimental variables of EXPERIMENT 1, carried out in the first wave. The purpose of this experiment was to test the effect of exposure to different Twitter accounts on a set of relevant political attitudes, such as political interest, affective and ideological polarization and political trust. Participation was restricted via invitation. Specifically, respondents were invited to follow one or two Twitter accounts from a list provided to them during the next seven days. Two experimental groups were created with a different list of Twitter accounts. Assignment to the first list, containing the accounts of the main parties’ leaders, or the second one, with a list of institutional accounts, was randomized by a computer algorithm. After seven days, respondents who participated in the experiment were re-contacted, answered some question about their exposure to and the content of the selected Twitter accounts, and completed the survey questionnaire about their political attitudes and opinions. To verify respondents’ activity on Twitter, information was collected with a passive behavioural meter.

Table 12 shows the experimental variables of EXPERIMENT 2, carried out in the second wave. This study examines the effects of priming political polarization or populist political frames on political polarization as measured in interpersonal trust

discrimination via behavioural games (i.e. trust games) and measures of political affect (feeling thermometers). Via simple randomization, respondents are assigned to one of 5 groups: Control, Polarizing Treatment, Unifying Treatment, Dispositional Issue Frame (populist) and Situational Issue Frame (non-populist).

Table 13 shows the experimental variables of EXPERIMENT 3, carried out in the third wave. The purpose of the experiment is to prove the social sorting behind social partisan identity. Respondents are asked to choose the basic characteristics of a hypothetical family unit moving respondents' next door. Specifically, we use a fully randomized conjoint experiment that varies the attributes presented with respect to 10/11 (depending on the country) dimensions shared by the neighboring families: territorial identity; ideology; immigrant; sex orientation; party supporter; education; environmentalist; pet owner; religion; politicisation; and language (for the Spanish case) or attitudes towards vaccination (for the Italian case). In each round or task, respondents are shown two neighbor's profiles, which both display the same dimensions but then vary the attributes within each dimension. For each task, respondents are required to choose between the two proposals presented to them.

Table 11, list of "esm" variables (first experiment); **¡Error! No se encuentra el origen de la referencia.**, list of "esm" variables (second experiment); **¡Error! No se encuentra el origen de la referencia.**, list of "esm" variables (third experiment) and **¡Error! No se encuentra el origen de la referencia.**, list of "met" variables (passive meter).

## Global Variables

Table 7 shows the list of global variables, which contain information on general characteristics of the survey and, hence, do not have any suffixes:

Table 7 List of Global Variables

Battery	Variable name	Value label	Variable label	W1	W2	W3

## Wave-Specific Variables

Table 8 shows the list of wave-specific variables, which contain information on the interview's characteristics in each wave:

Table 8 List of Wave-Specific Variables

Battery	Variable name	Value label	Variable label	W1	W2	W3
	s3b_1	cityk	Size of town/city	X		
	s4b_IT_1	educationk	Level of education	X

	s14a_1	religionk	Religious affiliation	X		
	s14b_1	attendancek	Attendance at religious services	X		

*Source:* own elaboration.

*Notes:* variable names of wave 1 shown in the first column; the names for the other waves only differ as regards the wave suffix.

## Socio-Demographic Variables

Table 9 shows the list of socio-demographic and socio-economic variables. Some of them are available in all the waves: gender, age and socio-demographic characteristics that could vary overtime (questions s8-s11d). All of the remaining socio-demographic variables (like marital status, number of children, or religious belonging, denomination and attendance) have only been asked in the first wave, as they do not tend to vary much in the short seven-months span in which the three surveys took place:

Table 9 List of Socio-Demographic Variables

Battery	Variable name	Value label	Variable label	W1	W2	W3
	s1_	genderk	Gender	X	X	X

	s14b_1	attendancek	Attendance at religious services	X		

*Source:* own elaboration.

*Notes:* variable names of wave 1 shown in the first column; the names for the other waves only differ as regards the wave suffix.

## Opinion, Attitudinal and Beliefs Variables

Table 10 shows the list of opinion, attitudinal and beliefs variables, i.e., of all the variables that belong to the “p” variables.

Some of them are available in all the waves, others are available in several waves, and others are only available in a given wave. For instance, the question on political interest is available in the three waves (“p1\_1”, “p1\_2”, “p1\_3”); the question on whether the respondent signed a petition is available in waves 1 and 3 (“p34a\_1” and “p34a\_3”), and the same is true for the other questions of the battery on non-electoral political participation; and the questions on whether different statements are true or false are only available in the third wave (this is the case for “p45a\_IT\_3”, “p45b\_IT\_3”, “p45c\_IT\_3”, “p45d\_IT\_3” and “p45e\_IT\_3”). In the “variable name” column, we have always chosen to display the name of the variable in the earliest wave in which it appears (for instance, for political interest, we display the name of the first wave, “p1\_1”).

Finally, many of the questions belong to batteries. Whenever this is the case, we have remarked it in the table by (a) introducing a row before the first question of the battery indicating the topic of the battery; and (b) adding a column in Table 10 to the left of the variable’s name where the name of the battery is clearly indicated.

Table 10 List of Opinion and other “p” Variables

## Experimental Variables

**¡Error! La autoreferencia al marcador no es válida.** shows the experimental variables of EXPERIMENT 1, carried out in the first wave. The purpose of this experiment was to test the effect of exposure to different Twitter accounts on a set of relevant political attitudes, such as political interest, affective and ideological polarization and political trust. Participation was restricted via invitation. Specifically, respondents were invited to follow one or two Twitter accounts from a list provided to them during the next seven days. Two experimental groups were created with a different list of Twitter accounts. Assignment to the first list, containing the accounts of the main parties' leaders, or the second one, with a list of institutional accounts, was randomized by a computer algorithm. After seven days, respondents who participated in the experiment were re-contacted, answered some question about their exposure to and the content of the selected Twitter accounts, and completed the survey questionnaire about their political attitudes and opinions. To verify respondents' activity on Twitter, information was collected with a passive behavioural meter.

Table 12 shows the experimental variables of EXPERIMENT 2, carried out in the second wave. This study examines the effects of priming political polarization or populist political frames on political polarization as measured in interpersonal trust discrimination via behavioural games (i.e. trust games) and measures of political affect (feeling thermometers). Via simple randomization, respondents are assigned to one of 5 groups: Control, Polarizing Treatment, Unifying Treatment, Dispositional Issue Frame (populist) and Situational Issue Frame (non-populist).

Table 13 shows the experimental variables of EXPERIMENT 3, carried out in the third wave. The purpose of the experiment is to prove the social sorting behind social partisan identity. Respondents are asked to choose the basic characteristics of a hypothetical family unit moving respondents' next door. Specifically, we use a fully randomized conjoint experiment that varies the attributes presented with respect to 10/11 (depending on the country) dimensions shared by the neighboring families: territorial identity; ideology; immigrant; sex orientation; party supporter; education; environmentalist; pet owner; religion; politicisation; and language (for the Spanish case) or attitudes towards vaccination (for the Italian case). In each round or task, respondents are shown two neighbor's profiles, which both display the same dimensions but then vary the attributes within each dimension. For each task, respondents are required to choose between the two proposals presented to them.

## 7. Codes for Categorical Variables

Below, we show the correspondence between the coding and labels of each of the variables having a non-generic label (we also display the coding of some categorical variables with generic value labels). When several consecutive variables (most often, of the same battery) have the same coding, after showing the names of all the variables, their coding is shown only once:

### Global Categorical Variables

#### **g7 (DEVICE):**

Minimum: 1. Maximum: 3

- 1 = Desktop
- 2 = Tablet
- 3 = Mobile

#### **g8 (SURVEYCOUNTRY):**Minimum: 1. Maximum: 5 1 = España

- 2 = Argentina
- 3 = Chile
- 4 = Italia
- 5 = Portugal

#### **g9 (TRACKER):**

Minimum: 1. Maximum: 4

- 1 = Only Desktop
- 2 = Only Mobile
- 3 = Desktop & Mobile
- 4 = Inactive
- .c = [NA]

#### **g10 (ZONA\_IT):**

Minimum: 1. Maximum: 4

- 1 = Area 1 (Piemonte, Val d'Aosta, Liguria, Lombardia)
- 2 = Area 2 (Trentino-Alto Adige, Veneto, Friuli-Venezia Giulia, Emilia-Romagna)
- 3 = Area 3 (Toscana, Umbria, Marche, Lazio, Sardegna)
- 4 = Area 4 (Abruzzo, Molise, Puglia, Campania, Basilicata, Calabria, Sicilia)
- .c = [NA]

#### **g11 (EDUCATION\_IT):**

Minimum: 1. Maximum: 8

- 1 = Scuola dell'infanzia, scuola primaria
- 2 = Scuola secondaria di primo grado
- 3 = Liceo, Istituto tecnico o istituto di formazione professionale

- 4 = Formazione tecnica superiore
- 5 = Laurea (non completata)
- 6 = Laurea
- 7 = Laurea magistrale / Master
- 8 = Dottorato
- .c = [NA]

**g12 (HABITAT\_IT):**

Minimum: 1. Maximum: 3

- 1 = <50001
- 2 = 50001-200000
- 3 = >=200001
- .c = [NA]

**g13 (REGION\_IT):**

Minimum: 1. Maximum: 20

- 1 = Abruzzo
- 2 = Basilicata
- 3 = Calabria
- 4 = Campania
- 5 = Emilia Romagna
- 6 = Friuli-Venezia Giulia
- 7 = Lazio
- 8 = Liguria
- 9 = Lombardia
- 10 = Marche
- 11 = Molise
- 12 = Piemonte
- 13 = Puglia
- 14 = Sardegna
- 15 = Sicilia
- 16 = Toscana
- 17 = Trentino-Alto Adigio
- 18 = Umbria
- 19 = Valle D'Aosta
- 20 = Veneto
- .c = [NA]

**g17 (Would you like to participate in this survey?):**

Minimum: 1. Maximum: 2

- 1 = Yes, I want to participate
- 2 = No, I prefer not to participate

**g18 (Select the option:):**

Minimum: 1. Maximum: 4

- 1 = OPTION A + OPTION C (Lista A)

- 2 = OPTION A + OPTION D (Lista B)
- 3 = OPTION B + OPTION C (Lista A)
- 4 = OPTION B + OPTION D (Lista B)

## Socio-Demographic Categorical Variables

**s1\_1 (Gender):**

**s1\_2 (Gender):**

**s1\_3 (Gender):**

Minimum: 1. Maximum: 2

- 1 = Male
- 2 = Female
- .z = [NA: not in wave]

**s2\_1REC (Range of Age):**

**s2\_2REC (Range of Age):**

**s2\_3REC (Range of Age):**

Minimum: 1. Maximum: 6

- 1 = 0\_17
- 2 = 18\_24
- 3 = 25\_34
- 4 = 35\_44
- 5 = 45\_54
- 6 = 55\_+
- .b = [DA]
- .z = [NA: not in wave]

**s3b\_1 (Size of town/city):**

Minimum: 1. Maximum: 5

- 1 = A big city
- 2 = A suburb of a large town or city
- 3 = A medium sized town
- 4 = A small town
- 5 = Rural area or village
- .a = [DK]

**s4b\_IT\_1 (Level of education):**

Minimum: 1. Maximum: 11

- 1 = Elementare/privo di titolo
- 2 = Media inferiore
- 3 = Superiori in corso
- 4 = Diploma di istituto professionale (3 anni)
- 5 = Diploma di maturità (5 anni)

- 6 = Università in corso/nessuna laurea conseguita
- 7 = Diploma universitario/laurea breve
- 8 = Laurea triennale di I livello
- 9 = Laurea specialistica di II livello o laurea 4-5 anni
- 10 = Master/scuola di specializzazione post-laurea
- 11 = Dottorato di ricerca
- .a = [DK]

**s5\_1 (Marital/civil status):**

Minimum: 1. Maximum: 6

- 1 = Married
- 2 = In a partnered relationship
- 3 = Legally separated
- 4 = Divorced
- 5 = Widowed
- 6 = None of the above (I have never been married)
- .a = [DK]

**s8\_1 (Employment status):**

**s8\_2 (Employment status):**

**s8\_3 (Employment status):**

Minimum: 1. Maximum: 10

- 1 = Employed, but on temporary leave (includes temporary maternity/paternity leave, accident, illness or holidays).
- 2 = Employed (full-time or part-time).
- 3 = Self-employed professional.
- 4 = Owner of a small personal or family business.
- 5 = Studying, even if you have been on holiday (includes company-paid training)
- 6 = Unemployed and actively seeking work
- 7 = Unemployed, wanting to find a job but not actively looking for one
- 8 = Chronically ill or permanently disabled
- 9 = Retired
- 10 = Homemaker, stay-at-home parent, or caregiver
- .a = [DK]
- .b = [DA]
- .z = [NA: not in wave]

**s9\_1 (Feelings about household income):**

**s9\_2 (Feelings about household income):**

**s9\_3 (Feelings about household income):**

Minimum: 1. Maximum: 4

- 1 = With our current income we live comfortably
- 2 = With our current income we get by
- 3 = With our current income we have difficulties
- 4 = With our current income we have many difficulties
- .a = [DK]

- .b = [DA]
- .z = [NA: not in wave]

- s11a\_1 (Concern about paying household bills):**
- s11b\_1 (Concern about reducing standard of living):**
- s11c\_1 (Concern about employment):**
- s11d\_1 (Concern about bank debts, mortgage):**
- s11a\_2 (Concern about paying household bills):**
- s11b\_2 (Concern about reducing standard of living):**
- s11c\_2 (Concern about employment):**
- s11d\_2 (Concern about bank debts, mortgage):**
- s11a\_3 (Concern about paying household bills):**
- s11b\_3 (Concern about reducing standard of living):**
- s11c\_3 (Concern about employment):**
- s11d\_3 (Concern about bank debts, mortgage):**

Minimum: 0. Maximum: 3

- 0 = Not at all concerned
- 1 = A bit concerned
- 2 = Quite concerned
- 3 = Very concerned
- .a = [DK]
- .b = [DA]
- .z = [NA: not in wave]

**s12\_IT\_1 (Net household income):**

Minimum: 1. Maximum: 11

- 1 = 500 or less // 6000 or less
- 2 = More than 500 euros up to 900 euros // More than 6000 euros up to 10800 euros
- 3 = Over 901 euros up to 1300 euros // More than 10801 euros up to 15600 euros
- 4 = Over 1301 euros up to 1500 euros // More than 15601 euros up to 18000 euros
- 5 = More than 1501 euros up to 2000 euros // Over 18001 euros up to 24000 euros
- 6 = Over 2001 euros up to 2600 euros // More than 24001 euros up to 31200 euros
- 7 = Over 2601 euros up to 3500 euros // More than 31201 euros up to 42000 euros
- 8 = More than 3501 euros up to 4500 euros // More than 42001 up to 54000
- 9 = More than 4501 euros up to 6000 euros // More than 54001 euros up to 72000 euros
- 10 = More than 6001 euros up to 8000 euros // More than 72001 euros up to 96000 euros
- 11 = More than 8001 euros // More than 96001 euros
- .a = [DK]

**s14a\_1 (Religious affiliation):**

Minimum: 1. Maximum: 9

- 1 = Catholic
- 2 = Protestant
- 3 = Orthodox
- 4 = Evangelical Christian
- 5 = Other Christian denominations

- 6 = Jewish
- 7 = Muslim
- 8 = Eastern religions (Buddhist, Hindu, Sikh, Shinto, Taoist)
- 9 = Other non-Christian religions
- .a = [DK]

**s14b\_1 (Attendance at religious services):**

Minimum: 1. Maximum: 6

- 1 = Every day
- 2 = More than once a week
- 3 = Once a week
- 4 = At least once a month
- 5 = Only on special religious holidays
- 6 = Never
- .a = [DK]

## Opinion or Attitudinal Categorical Variables

There are many opinion and attitudinal variables (“p” variables) that are categorical, often with non-generic value labels. We show them below.

**p1\_1 (Political interest):**

**p1\_2 (Political interest):**

**p1\_3 (Political interest):**

Minimum: 1. Maximum: 4

- 1 = A lot
- 2 = A fair amount
- 3 = A little
- 4 = Not at all
- .a = [DK]
- .b = [DA]
- .z = [NA: not in wave]

**p2\_1 (Satisfaction with the national economy):**

**p2\_3 (Satisfaction with the national economy):**

Minimum: 0. Maximum: 10

- 0 = 0 Completely dissatisfied
- 1 = 1
- 2 = 2
- 3 = 3
- 4 = 4
- 5 = 5
- 6 = 6
- 7 = 7
- 8 = 8

- 9 = 9
- 10 = 10 Completely satisfied
- .a = [DK]
- .z = [NA: not in wave]

**p3\_IT\_1 (Main problem in Italy):**

**p3\_IT\_2 (Main problem in Italy):**

**p3\_IT\_3 (Main problem in Italy):**

Minimum: 1. Maximum: 23

- 1 = The Pandemic
- 2 = Unemployment
- 3 = Drugs
- 4 = The healthcare system
- 5 = Housing
- 6 = Education
- 8 = International terrorism (Islamic State/ISIS)
- 9 = Corruption
- 10 = Immigration
- 11 = Brexit and EU integration
- 12 = Violence against women
- 13 = Political instability
- 14 = The refugee crisis
- 15 = Climate change
- 16 = Pensions
- 17 = Citizen insecurity
- 18 = Taxes
- 19 = Parties and politicians in general
- 21 = The economic situation
- 22 = Other
- 23 = Tax evasion
- .a = [DK]
- .z = [NA: not in wave]

**p4a\_1 (Say in national politics):**

**p4b\_1 (Influence on national politics):**

**p4a\_3 (Say in national politics):**

**p4b\_3 (Influence on national politics):**

Minimum: 1. Maximum: 5

- 1 = Not at all
- 2 = Very little
- 3 = To some extent
- 4 = A fair amount
- 5 = A great deal
- .a = [DK]
- .z = [NA: not in wave]

**p4c\_1 (Ability to be in political group):**

**p4c\_3 (Ability to be in political group):**

Minimum: 1. Maximum: 5

1 = Not at all able

2 = A little able

3 = Quite able

4 = Very able

5 = Completely able

.a = [DK]

.z = [NA: not in wave]

**p4d\_1 (Ability to participate in politics):**

**p4d\_3 (Ability to participate in politics):**

Minimum: 1. Maximum: 5

1 = Not at all confident

2 = A little confident

3 = Quite confident

4 = Very confident

5 = Completely confident

888 = I don't know

.a = [DK]

.z = [NA: not in wave]

**p5a\_1 (Freedom to criticize the government):**

**p5b\_1 (Jobs for everyone):**

**p5c\_1 (Free and fair elections):**

**p5d\_1 (Low income inequality):**

**p5e\_1 (A free and uncensored media):**

**p5f\_1 (Protection of minority rights):**

**p5g\_1 (Majoritarian rule):**

**p5a\_2 (Freedom to criticize the government):**

**p5b\_2 (Jobs for everyone):**

**p5c\_2 (Free and fair elections):**

**p5d\_2 (Low income inequality):**

**p5e\_2 (A free and uncensored media):**

**p5f\_2 (Protection of minority rights):**

**p5g\_2 (Majoritarian rule):**

**p5a\_3 (Freedom to criticize the government):**

**p5b\_3 (Jobs for everyone):**

**p5c\_3 (Free and fair elections):**

**p5d\_3 (Low income inequality):**

**p5e\_3 (A free and uncensored media):**

**p5f\_3 (Protection of minority rights):**

**p5g\_3 (Majoritarian rule):**

Minimum: 1. Maximum: 4

- 1 = Very important
- 2 = Important
- 3 = Somewhat important
- 4 = Not important at all
- .a = [DK]
- .z = [NA: not in wave]

**p6a\_1 (Freedom of media in country):**

**p6a\_3 (Freedom of media in country):**

Minimum: 1. Maximum: 4

- 1 = Not free
- 2 = Somewhat free
- 3 = Free
- 4 = Very free
- .a = [DK]
- .z = [NA: not in wave]

**p7a\_1 (One-party elections):**

**p7b\_1 (Abolishment of National Assembly / Parliament):**

**p7c\_1 (Government by armed forces):**

**p7d\_1 (Party exclusion in national elections):**

**p7e\_1 (Restricted voting rights):**

**p7f\_1 (Media censorship):**

**p7g\_1 (Ban on public protests):**

**p7a\_2 (One-party elections):**

**p7b\_2 (Abolishment of National Assembly / Parliament):**

**p7c\_2 (Government by armed forces):**

**p7d\_2 (Party exclusion in national elections):**

**p7e\_2 (Restricted voting rights):**

**p7f\_2 (Media censorship):**

**p7g\_2 (Ban on public protests):**

**p7a\_3 (One-party elections):**

**p7b\_3 (Abolishment of National Assembly / Parliament):**

**p7c\_3 (Government by armed forces):**

**p7d\_3 (Party exclusion in national elections):**

**p7e\_3 (Restricted voting rights):**

**p7f\_3 (Media censorship):**

**p7g\_3 (Ban on public protests):**

Minimum: 1. Maximum: 5

- 1 = Strongly agree
- 2 = Agree
- 3 = Neither agree or disagree
- 4 = Disagree
- 5 = Strongly disagree
- .a = [DK]

.z = [NA: not in wave]

**p8\_1 (Preferred political regime):**

**p8\_3 (Preferred political regime):**

Minimum: 1. Maximum: 3

1 = For people like me, one regime is the same as another

2 = Under some circumstances, an authoritarian regime is preferable to a democratic system

3 = Democracy is preferable to any other form of government

.a = [DK]

.b = [DA]

.z = [NA: not in wave]

**p9\_1 (Satisfaction with democracy in country):**

**p9\_3 (Satisfaction with democracy in country):**

Minimum: 1. Maximum: 4

1 = Not at all satisfied

2 = Not very satisfied

3 = Somewhat satisfied

4 = Very satisfied

.a = [DK]

.z = [NA: not in wave]

**p10a\_1 (Unemployment):**

**p10b\_1 (Education):**

**p10c\_1 (Health):**

**p10d\_1 (Immigration):**

**p10e\_1 (Pensions):**

**p10f\_1 (Corruption):**

**p10g\_1 (Social inequality):**

**p10h\_1 (The COVID-19 pandemic):**

**p10a\_3 (Level of Unemployment):**

**p10b\_3 (Education):**

**p10c\_3 (Health):**

**p10d\_3 (Situation with immigrants):**

**p10e\_3 (The pension system):**

**p10f\_3 (Corruption):**

**p10g\_3 (Social inequality):**

**p10h\_3 (The COVID-19 pandemic):**

Minimum: 0. Maximum: 10

0 = 0 Extremely bad

1 = 1

2 = 2

3 = 3

4 = 4

5 = 5

6 = 6  
7 = 7  
8 = 8  
9 = 9  
10 = 10 Extremely good  
.a = [DK]  
.b = [DA]

## 8. Polarization Indices

We propose a set of individual indicators of affective and ideological polarization departing from the initial work of Wagner (2020). The affective polarization indices are based on sentiments towards party voters and party leaders, while the ideological polarization indicators are based on the placement of respondents and political parties on the left-right scale.

All these indicators are weighted by party size. The proportion of votes received by a political party is strongly related to its relevance in the party system and its capacity to influence the formation of government. Therefore, it is reasonable to argue that it matters more if the disliked voters or leaders belong to large parties than if they belong to small parties.

### Affective polarization indices

#### *Weighted mean distance from most-liked voters/leader*

Based on Wagner (2020), affective polarization is measured, first, as the weighted mean distance from most-liked voters' group or party leader. This measure requires positive identification with one specific group of voters or one specific leader, and it captures how much an individual on average dislikes other voters or leaders compared to their preferred voters' group or leader. The general formula is as follows:

$$WAPD_i = \sqrt{\sum_{g=1}^g v_g * (Like_{gi} - Like_{max,i})^2} \quad (1)$$

where  $g$  is the out-group (voters or leaders),  $i$  the individual respondent,  $Like_{max,i}$  is the like-dislike score assigned to the most liked voters' group or leader (in-group),  $Like_{gi}$  is the like-dislike score assigned to each out-group  $g$  by individual respondent  $i$ , and  $v_g$  is the size of each voters' party or leader's party. The size is measured as the normalised (average) vote intention of each out-party.<sup>1</sup> This normalised proportion of votes is calculated over the total number of predicted votes received by the considered parties minus the predicted votes received by the party of the preferred group of voters or the party of the preferred leader.

This index is computed, respectively, for the main voters' groups and party leaders of the different countries included in the project, using feeling thermometer scales which range from 0 to 100, where 0 means "unfavourable feelings" and 100 means "favourable feelings". These scales have been rescaled to range from 0 to 10. The index is calculated for all respondents who declare a level of affect for at least two voters' groups or leaders.

In the event that some respondents assign their highest like-dislike score to more than one group of voters or leader, we need to identify to which of these voters or leaders the respondents feel closest. To do so, we assign the preferred voters' group/leader to these respondents based, first, on party identification. For those who do not identify with any of these parties, we use voting intention for the upcoming national elections. The remaining respondents who cannot be attributed to a specific preferred group are discarded from the index calculation.

---

<sup>1</sup> For more details about the weights, see the section "Weights".

The main advantage of WAPD is that it clearly distinguishes between in-groups and out-groups, and it directly measures the difference in feelings between them. Moreover, as described below, this index allows us to separately analyse in-group like and out-group dislike, which is theoretically relevant (e.g. Gidron, Adams and Horne 2020). However, the index also has some limitations. Since WAPD requires each respondent to have a specific preferred group of voters or party leader, it may be problematic in multiparty contexts where identification with more than one party or leader is usual. Moreover, current trends in various party systems in the form of increasing levels of electoral volatility, number of independent voters, and surge of new challenging parties may weaken the validity of this measure.

Departing from WAPD, we break down affective polarization into its in-group and out-group components:

**a) In-voters/leader like**

This index simply measures the feelings thermometer scores towards the most-liked voters' group or leader:

$$\text{InLike}_i = \text{Like}_{\max, i} \tag{2}$$

The index ranges from unfavourable feelings to favourable feelings.

**b) Out-voters/leader dislike**

This index measures the weighted mean unfavourable feelings towards the voters' groups or leaders that are not the most liked one (out-groups). The general formula is as follows:

$$\text{OutDislike}_i = \sum_{g=1}^g (v_g * \text{Dislike}_{gi}) \tag{3}$$

where  $g$  is the out-group (voters' group or leader),  $i$  the individual respondent,  $\text{Dislike}_{gi}$  the (reversed) feeling thermometer rating assigned to each out-group  $g$  by individual respondent  $i$ , and  $v_g$  is the normalised vote intention of each out-party (calculated over the total number of predicted votes received by the selected out-parties).<sup>2</sup> Given that the thermometer feeling scales are reversed, the index ranges from favourable feelings to unfavourable feelings.

***Weighted spread of like-dislike scores towards voters/leaders***

The second index, which is also based on Wagner (2020), measures affective polarization as the weighted spread of like-dislike scores towards voters or leaders. It captures the extent to which affect is spread out across the various voters' groups and leaders in a given party system. The general formula is as follows:

$$\text{WAPS}_i = \sqrt{\sum_{g=1}^g v_g * (\text{Like}_{gi} - \overline{\text{Like}}_i)^2} \tag{4.1}$$

where  $g$  is the group (voters' group or leader),  $i$  the individual respondent,  $\overline{\text{Like}}_i$  is the respondent's average like-dislike score,  $\text{Like}_{gi}$  is the like-dislike score assigned to each group  $g$  by individual respondent  $i$ , and  $v_g$  is the size of each voters' party or leader's

---

<sup>2</sup> For more details about the weights, see the section "Weights".

party. The size of a party is measured as the normalised (average) vote intention of each party.<sup>3</sup>

The average like-dislike score is also weighted by party size:

$$\overline{Like}_i = \sum_{g=1}^g (v_g * Like_{gi}) \quad (4.2)$$

This index is measured, respectively, for the main voters' groups and party leaders of the different countries. As in the previous index, like-dislike feelings towards voters and leaders are operationalised using feeling thermometer scales, which range from 0 ("unfavourable feelings") to 100 ("favourable feelings"). However, these scales have been rescaled to range from 0 to 10. Finally, this index is calculated for all respondents who declare a level of affect for at least two voters' groups or leaders.

Contrasting with WAPD, the WAPS index recognises that individuals may not have a single positive party identification, and thus it takes into account all respondents who express feelings of like-dislike towards voters and leaders. Moreover, this spread measure is also better suited to capture opposition between blocs of partisans or party leaders rather than between single voters' groups or leaders, something relevant in multi-party settings (Wagner 2020). By contrast, the main disadvantage of this measure is that it does not allow us to disentangle affective polarization between its in-group and out-group components.

### ***Highest like-dislike score towards voters/leaders***

Finally, we also built a variable that captures the maximum level of affect that each respondent assigns to a voters' group or party leader. Notice that this variable is equal to the in-group like one, with the difference that it also includes the respondents to whom we are not able to attribute a specific preferred group (and, hence, who are not included in the WAPD index, although they are in the WAPS index). As argued by Wagner (2020), by including this variable in a model as a control variable, we prevent affective polarization from acting as a proxy for simply liking a leader or voters' group.

## **Ideological polarization indices**

### ***Weighted perceived ideological polarization***

Following Wagner (2020), the first ideological polarization index is the weighted perceived level of ideological polarization between parties. The formula is as follows:

$$WPIP_i = \sqrt{\sum_{p=1}^p v_p * (IdPosition_{pi} - \overline{IdPosition}_i)^2} \quad (5.1)$$

where  $p$  is the political party,  $i$  is the individual respondent,  $IdPosition_{pi}$  is the left-right position of party  $p$  assigned by respondent  $i$ ,  $\overline{IdPosition}_i$  is the respondent's average ideological position of political parties, and  $v_p$  is the size of each party, measured as the vote intention of each party.<sup>4</sup>

<sup>3</sup> For more details about the weights, see the section "Weights".

<sup>4</sup> For more details about the weights, see the section "Weights".

The average ideological position of political parties is also weighted by party size:

$$\overline{IdPosition}_i = \sum_{p=1}^p (v_p * IdPosition_{pi}) \quad (5.2)$$

The index includes the ideological position of the main parties of the different countries in the project. The scales that measure the ideological position of each party (according to respondents' views) range from 0 ("Left") to 10 ("Right"). Finally, this index is calculated for all respondents who attribute an ideological position to at least two parties.

### ***Ideological extremism***

We measure ideological extremism by simply taking the absolute difference between respondents' ideological self-placement and the average ideology of respondents for each panel wave. The formula of the index is as follows:

$$IE_i = \sqrt{(Ideol_i - \overline{Ideol})^2} \quad (6)$$

where  $i$  is the individual respondent,  $Ideol_i$  is the reported self-ideological position of respondent  $i$ , and  $\overline{Ideol}$  is the average ideology of respondents. The ideological self-placement scale ranges from 0 ("Left") to 10 ("Right").

## **List of Polarization Variables**

**WAPSV\_1/2/3:** Weighted spread of like-dislike score for voters

Included feeling scales: voters of PD, M5S, Lega, Fdl, FI, IV and LeU

Weights: (Weighted) mean vote intention (LeU is made up of two different left-wing parties, Art.1 and SI, so I have weighted LeU by the sum of the vote intention of both parties)

**WAPDV\_1/2/3:** Weighted mean distance from most liked group of voters

Included feeling scales: voters of PD, M5S, Lega, Fdl, FI, IV and LeU

Weights: (Weighted) mean vote intention (LeU is made up of two different left-wing parties, Art.1 and SI, so I have weighted LeU by the sum of the vote intention of both parties)

**APpdV\_1/2/3:** Weighted mean distance from most-liked voters (PD voters)

**APm5sV\_1/2/3:** Weighted mean distance from most-liked voters (M5S voters)

**APlegaV\_1/2/3:** Weighted mean distance from most-liked voters (Lega voters)

**APfdiV\_1/2/3:** Weighted mean distance from most-liked voters (Fdl voters)

**APfiV\_1/2/3:** Weighted mean distance from most-liked voters (FI voters)

**APivV\_1/2/3:** Weighted mean distance from most-liked voters (IV voters)

**APleuV\_1/2/3:** Weighted mean distance from most-liked voters (LeU voters)

**InLikeV\_1/2/3:** In-voters like

**OutDislikeV\_1/2/3:** Out-voters dislike

**MaxV\_1/2/3:** Maximum level of affect for voters' groups

**maxVoters\_1/2/3:** In-groups (respondents are classified based on their most liked group of voters, party identification and vote intention)

---

**WAPSL\_1/2/3:** Weighted spread of like-dislike score for leaders

Included feeling scales: Letta (PD); Conte (M5S); Salvini (Lega); Meloni (Fdl); Berlusconi (FI); Renzi (IV); Speranza (LeU-Art.1)

Weights: (Weighted) mean vote intention (I have weighted Speranza by the sum of the vote intention of Art.1 and SI)

**WAPDL\_1/2/3:** Weighted mean distance from most liked leader

Included feeling scales: Letta (PD); Conte (M5S); Salvini (Lega); Meloni (Fdl); Berlusconi (FI); Renzi (IV); Speranza (LeU-Art.1)

Weights: (Weighted) mean vote intention (I have weighted Speranza by the sum of the vote intention of Art.1 and SI)

**APletta\_1/2/3:** Weighted mean distance from most-liked leader (Letta)

**APconte\_1/2/3:** Weighted mean distance from most-liked leader (Conte)

**APsalvini\_1/2/3:** Weighted mean distance from most-liked leader (Salvini)

**APmeloni\_1/2/3:** Weighted mean distance from most-liked leader (Meloni)

**APberlusconi\_1/2/3:** Weighted mean distance from most-liked leader (Berlusconi)

**APrenzi\_1/2/3:** Weighted mean distance from most-liked leader (Renzi)

**APsperanza\_1/2/3:** Weighted mean distance from most-liked leader (Speranza)

**InLikeL\_1/2/3:** In-leader like

**OutDislikeL\_1/2/3:** Out-leader dislike

**MaxL\_1/2/3:** Maximum level of affect for a leader

**maxLeader\_1/2/3:** In-groups (respondents are classified based on their most liked leader, party identification and vote intention)

---

**WPIP\_1/2/3:** Weighted perceived ideological polarization

Included parties: PD, M5S, Lega, Fdl, FI, IV and LeU

Weights: (Weighted) mean vote intention (LeU is made up of two different left-wing parties, Art.1 and SI, so I have weighted LeU by the sum of the vote intention of both parties)

**IE\_1/2/3:** Ideological extremism

## Weights

We weight each party, leader or voters' group by the weighted mean voting intention estimate of each party. Specifically, we proceed as follows per each panel wave:

- 1- We use the list of electoral polls for the next national election collected by Wikipedia.
- 2- We consider all the electoral polls performed 90 days before the first day of the wave's fieldwork.
- 3- We calculate the mean voting intention estimate of each relevant party, weighted by three different factors (this is a free adaptation of the general rules described in El País: <https://elpais.com/especiales/2019/elecciones-generales/encuestas-electorales/>):

**Weights by date.** We assign more weight to the most recent polls by applying the following exponential formula:

$$\text{Date weight} = 1.01228161^t$$

where  $t$  is the number of days of the considered period, so that it ranges from 0 (which corresponds to the poll conducted 90 days before the first day of the wave's fieldwork) to 90 (which corresponds to the poll conducted on the first day of the wave's fieldwork).

According to the formula, the voting intention in a poll conducted at  $t=0$  is multiplied by 1, while the voting intention in a poll conducted at  $t=90$  is multiplied by 3.

**Weights by repeated polls.** We assign less weight to the repeated polls from the same polling firm. Concretely, the most recent poll of each firm is multiplied by 1, while the rest of polls from the same firm are multiplied by 0.6.

**Weights by sample size.** The idea is that the polls with a higher sample size receive more weight, although following a decreasing trend. We establish two thresholds, based on the following formula (López-Roldán and Fachelli 2015: 22):

$$n = (z \times P \times Q) / (e)$$

where  $n$  is the sample size,  $z$  is the number of deviation units that implies the adopted confidence level,  $P$  is the proportion of individuals who have a given characteristic,  $Q$  is the proportion of individuals who do not have this characteristic, and  $e$  is the sampling error.

Assuming a confidence level of 95% ( $z=1.96$ ) and a situation of maximum indeterminacy ( $P=Q=50\%$ ), we calculated  $n$  if  $e=3\%$  and  $e=2\%$ :

$$n = (1.96 \times 50 \times 50) / (0.03) = 1067.11$$

$$n = (1.96 \times 50 \times 50) / (0.02) = 2401$$

Given that, all the polls that have 1067 respondents or less are multiplied by 0.6; the polls that have between 1068 and 2400 respondents are multiplied by 1; and those that have 2401 respondents or more are multiplied by 1.2. The

polls that have an unknown sample size are multiplied by 0.6.

Finally, the **total weights** are calculated: Total weights = weights by date x weights by repeated polls x weights by sample size.
