

POST DOCTORAL CONTRACT POSITION

**Laboratory of Neuropharmacology-Neurophar
Department of Experimental & Health Sciences
Universitat Pompeu Fabra
Barcelona Biomedical Research Park**

The Laboratory of Neuropharmacology, Universitat Pompeu Fabra, in Barcelona, Spain, seeks a **scientist** who has demonstrated (or has strong potential for) innovation and leadership in research, to integrate her/him in their research group which covers a **broad range of topics in neuroscience**.

Open position: **Postdoctoral contract.**

Specific issue of the position: **Evaluation of chronic (neuropathic and osteoarthritic) pain manifestations and co-morbidities (affective, cognitive, locomotor, cardiovascular) for innovative and preventive treatment strategies.**

Research project: The position is within a **research line on experimental pain in the frame of an EU-funded H2020 research project**, with the collaboration of some top European research groups.

Specific requests: The candidate must be **proficient** in the design, execution and analysis of **behavioural studies of experimental pain** in murine models using **nociceptive paradigms**, including thermal nociceptive models, neuropathic pain models and mechanical perception models, and **complementary behavioural tests** for the evaluation of locomotion, anxiety, depression and cognition. A particular focus will be given to the elucidation of **inter-individual variability** due to genetic (including sex) and/or environmental factors with the different treatments or conditions studied. Candidates should hold (or commitment to have it before January 1, 2020) a **PhD degree (Biology, Biotechnology, Pharmacology, Neurosciences, Medicine, Psychobiology,**

Pharmacy or related subjects) and have a **strong** scientific-technical background on **experimental pain in murine models**. In addition, it will be suitable experience with **operant behaviour** paradigms in rodents. She/he should be fluent in English and have an interactive personality. Past experience in international cooperative projects will be positively valued.

Important notice: The candidate **must** have a **valid FELASA-accredited certificate** (Researcher level) to work with experimental animals (rodents). Lack of this requirement will make the candidate not eligible for the post whichever her/his experience and knowledge could be.

Group: The selected person will join the **Laboratory of Neuropharmacology**, which is presently composed of 33 members, and will supervise a **PhD student** and count on the support of expert technicians of the group, will report directly to the Director and will have a good opportunity to further develop her/his professional career in this field.

Offer: the selection is to be carried out immediately, with a **deadline for application on December 20th, 2019**, whilst **start working is planned ideally on February 1st, 2020**. The research contract is awarded for a **period of 5 years**, with a **competitive salary** (to be negotiated depending of the specific experience of the candidate).

Applications should include:

- A full CV
- A statement of research interests and plans (**motivation letter**)
- The names (and e-mail addresses) or the **letters of support** of **two scholars** who are willing to serve as references for the applicant

Contact: please, send you application (**letter of intent plus updated cv** and two **letters of support** or referees) and your contact data, **stating the reference POSTDOCTORAL CONTRACT NEUROPHAR**, by e-mail to: info.neurophar@upf.edu
