

Readings in Economic Theory

2019-2020- Academic Year

Master of Research in Economics, Finance and Management

- Readings in Economic Theory
 - Total credits: 3 ECTS
 - Type of subject: Elective
 - Department of Economics and Business
 - Coordinator: Alexander Frug
- Code: 32499
Workload: 75 hours
Term: 2

🌀 Introduction and Teaching methodology

The main focus of the course will be on models of communication. We will deepen the discussion we began in Advanced Micro III and consider several additional environments of strategic information transmission. We will then discuss selected models on static and dynamic persuasion and information design. We may also discuss additional papers in communication and economic theory more broadly, based on mutual interest and time availability.

The format of the course is aimed to be a composition of frontal lectures and active discussion. The relative weights on the different topics, the selection of specific readings, as well as the general approach of the course will be flexible and depend on time and interest. On top of developing familiarity with the selected topics, the course aims to help to enhance other abilities that are directly related to the academic researcher's work such as self-studying, presentation, refereeing, and orientation in the literature. Some sessions will be devoted, at least in part, to students' presentations. Students will be offered a high degree of freedom in selecting the papers on which they want to lead the discussion in class.

The course is targeted to MRes students who are interested in micro theory and have completed the sequence of Advanced Microeconomics courses in their first year of graduate studies. In particular, the course assumes familiarity with the topics and main ideas discussed in Advanced Microeconomics III.

Evaluation

Each student will be assigned/select two papers. One of the papers will be presented and discussed in class. The other paper, which most likely would be a working paper that has not been published yet, will be refereed by the student. Students will be evaluated based on their active participation, quality and clarity of the presentation, and the referee report.

🌀 Contents

The topics we will discuss in class will come, for the most part, from the following list of references (which will be continuously updated before and during the course). We will cover only a fraction of these papers. In addition, in an attempt to be up to date with some of the most recent developments, we will be discussing selected working papers that are currently being presented in seminars and conferences.
