

Annotating APPRAISAL in text and corpora

Challenges and strategies

Matteo Fuoli

LUND UNIVERSITY

Mini-workshop on Appraisal Theory and the Language of Evaluation
Universitat Pompeu Fabra, 18th of March, 2016

Outline

LUND UNIVERSITY

1. Introduction: Evaluation in discourse
2. An overview of APPRAISAL theory
3. Challenges in annotating APPRAISAL in text
4. Strategies for reliably annotating APPRAISAL

Introduction

Evaluation in discourse

LUND UNIVERSITY

- That was a **really great** movie!
- Donald Trump is a **clown**.
- **Sadly**, what we've all been hearing is true.

Bank of America[®]

Kellogg's

Nestlé

bp

NOVARTIS

Introduction

Evaluation in discourse

LUND UNIVERSITY

- BP is **progressive, responsible, innovative** and **performance driven**. [BP 2009 Sustainability Review]
- Our business idea is to offer a wide range of **well designed, functional** home furnishing products. [IKEA 2009 Sustainability Report]

S1 Dearfellow shareholder

The **tragic** events of 2010 will forever be written in the memory of this company and the people who work here .

The explosion and fire on the Deepwater Horizon rig

S2 **shocked** everyone within BP , and we feel **great sadness** that 11 people died . We are **deeply sorry** for the **grief** felt by their families and friends . We **know nothing** can restore the loss of those men .

The accident on 20 April 2010 turned into an unprecedented

LUND UNIVERSITY

An overview of APPRAISAL theory

Annotating APPRAISAL in text and corpora: Challenges and strategies, Matteo Fuoli, Lund University, Sweden

Background

Theoretical approaches to evaluation

LUND UNIVERSITY

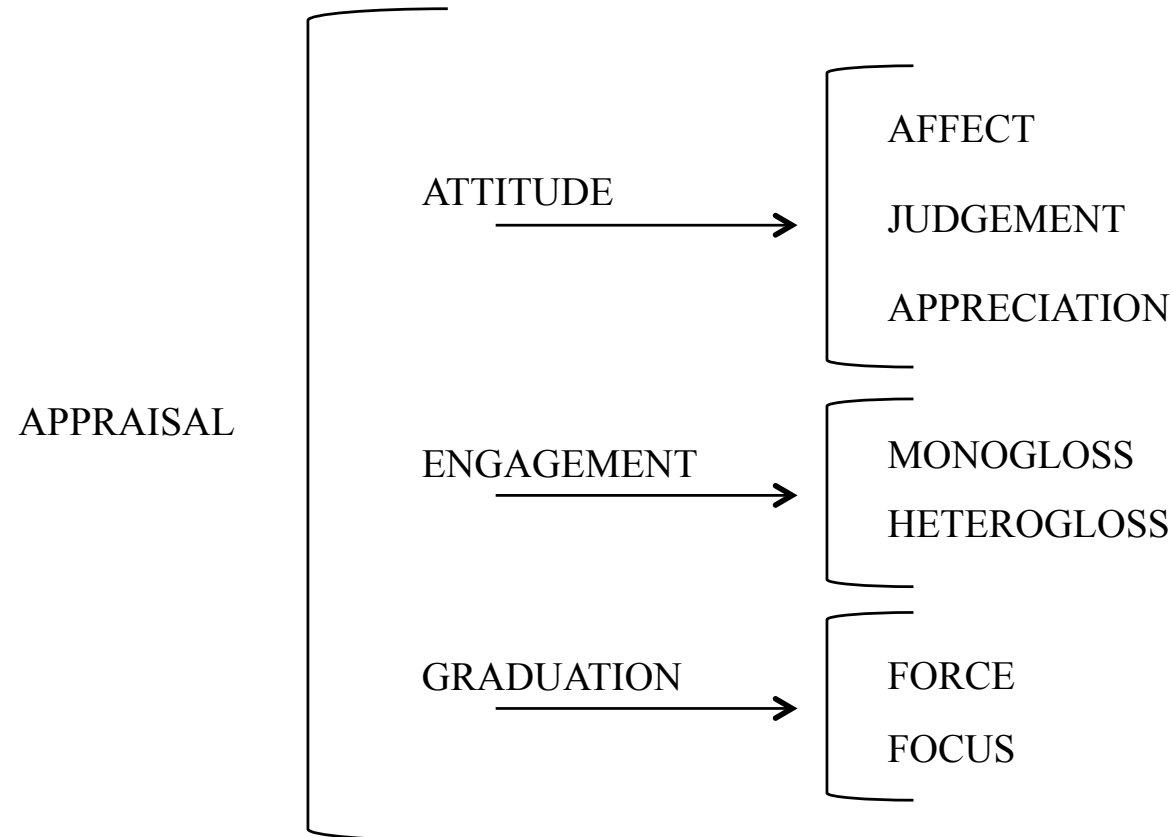

- **Stance** (Biber and Finegan, 1988, 1989; Conrad and Biber, 2000)
- **Evaluation** (Hunston and Thompson, 2000; Thompson and Alba-Juez, 2014)
- **APPRAISAL (Systemic Functional Linguistics)** (Martin and White, 2005)
- **Bednarek's parametric approach to evaluation** (Bednarek, 2006)
- **Stance-taking (Conversation Analysis)** (Englebretson, 2007)
- **Sentiment Analysis (Computational Linguistics)** (Pang and Lee, 2008)

Background

An overview of APPRAISAL theory

LUND UNIVERSITY

An overview of Appraisal (adapted from Martin and White, 2005)

Background

An overview of APPRAISAL theory

LUND UNIVERSITY

- ATTITUDE
 - The explosion and fire on the Deepwater Horizon rig **shocked** everyone within BP and we feel great **sadness** that 11 people died.
- ENGAGEMENT
 - Despite these actions, ConocoPhillips **considers it possible** that the recession **could** restrain energy demand and prices for several years.
- GRADUATION
 - I am **extremely** proud of BP's 2009 safety performance.

Background

Manual text annotation

LUND UNIVERSITY

- Manual text annotation has become a popular method for examining and comparing the use of evaluative language resources across texts and corpora (e.g. Bednarek, 2008; Carretero and Taboada, 2014; Fuoli, 2012; Fuoli and Hommerberg, 2015; Lipovsky, 2013; O'Donnell, 2014; Pounds, 2011; Taboada and Carretero, 2012; Ryshina-Pankova, 2014; Santamaría-García, 2014)
- However, annotating APPRAISAL presents several challenges to achieving reliable and replicable analyses

LUND UNIVERSITY

Challenges in annotating APPRAISAL

Annotating APPRAISAL in text and corpora: Challenges and strategies, Matteo Fuoli, Lund University, Sweden

Challenges in annotating APPRAISAL

LUND UNIVERSITY

- Evaluation may be realized through an open-ended range of expressions of varying length and complexity and belonging to any word class (e.g. Hunston, 2011)

excels [VB]

outstanding [ADJ]

extremely talented [ADJP]

in an enviably strong position [ADV]

one of the world's great enterprises [Complex NP]

Challenges in annotating APPRAISAL

LUND UNIVERSITY

- Evaluation is a highly context-dependent phenomenon (e.g. Bednarek 2006: 8; Hunston 2011: 10; Macken- Horarik and Isaac 2014; Martin and White 2005; Paradis et al. 2012; Thompson and Alba-Juez 2014)

There's thin and light. Then there's **thin** and **light** on a whole new level. iPod touch has a super-thin aluminum body that feels barely there in your hand or pocket.

Challenges in annotating APPRAISAL

LUND UNIVERSITY

- Setting the textual boundaries of evaluative expressions (*unitizing*) is often a complicated and arbitrary exercise

We are well-positioned to generate shareholder value with distinct competitive advantages and a **steadfast commitment** to the **highest standards of ethics**.

Challenges in annotating APPRAISAL

LUND UNIVERSITY

- Setting the textual boundaries of evaluative expressions (*unitizing*) is often a complicated and arbitrary exercise

We are well-positioned to generate shareholder value with distinct competitive advantages and a **steadfast commitment to the highest standards of ethics.**

Challenges in annotating APPRAISAL

LUND UNIVERSITY

- The distinction between *inscribed* and *invoked* APPRAISAL is far from clear-cut (e.g. Bednarek, 2006)

There's thin and light. Then there's **thin** and **light** on a whole new level. iPod touch has a super-thin aluminum body that feels barely there in your hand or pocket.

Challenges in annotating APPRAISAL

LUND UNIVERSITY

- Different interpretations for an expression are often equally plausible, and multiple category labels valid

We are a self-sustaining and competitive international, integrated energy company with **diligent** financial management.

Challenges in annotating APPRAISAL

LUND UNIVERSITY

- The distinction between the categories in the framework is not always clear

ExxonMobil Chemical has delivered **industry-leading**
performance.

Challenges in annotating APPRAISAL

LUND UNIVERSITY

- Annotating APPRAISAL entails a number of practical issues

ExxonMobil's success is underpinned by our commitment to integrity - our **systematic** and **unwavering** focus on safety.

Challenges in annotating APPRAISAL

LUND UNIVERSITY

- Annotating APPRAISAL entails a number of practical issues

ExxonMobil's success is underpinned by our commitment to integrity - our **systematic and unwavering** focus on safety.

Reliability, replicability, transparency

LUND UNIVERSITY

- **Reliability:** “the extent to which a measurement procedure yields the same answer however and whenever it is carried out” (Kirk and Miller, 1986: 19)
 - *test-retest* reliability
 - *internal consistency* reliability
 - *interrater* reliability

Reliability, replicability, transparency

LUND UNIVERSITY

- The question of reliability has been dismissed by Martin and White on the grounds that “so-called objectivity is impossible” (Martin and White, 2005: 207)
- Measures of inter-coder or intra-coder agreement are rarely reported (for exceptions, see Fuoli, 2012; Fuoli and Hommerberg, 2015; Read and Carroll, 2010; Ryshina-Pankova, 2014; Taboada and Carretero, 2012)
- In certain cases limited information is given about the annotation criteria or about how this process was carried out (e.g. Lipovsky, 2008, 2013; Mackay and Parkinson, 2009; Pounds, 2010, 2011; Santamaría-García 2014)

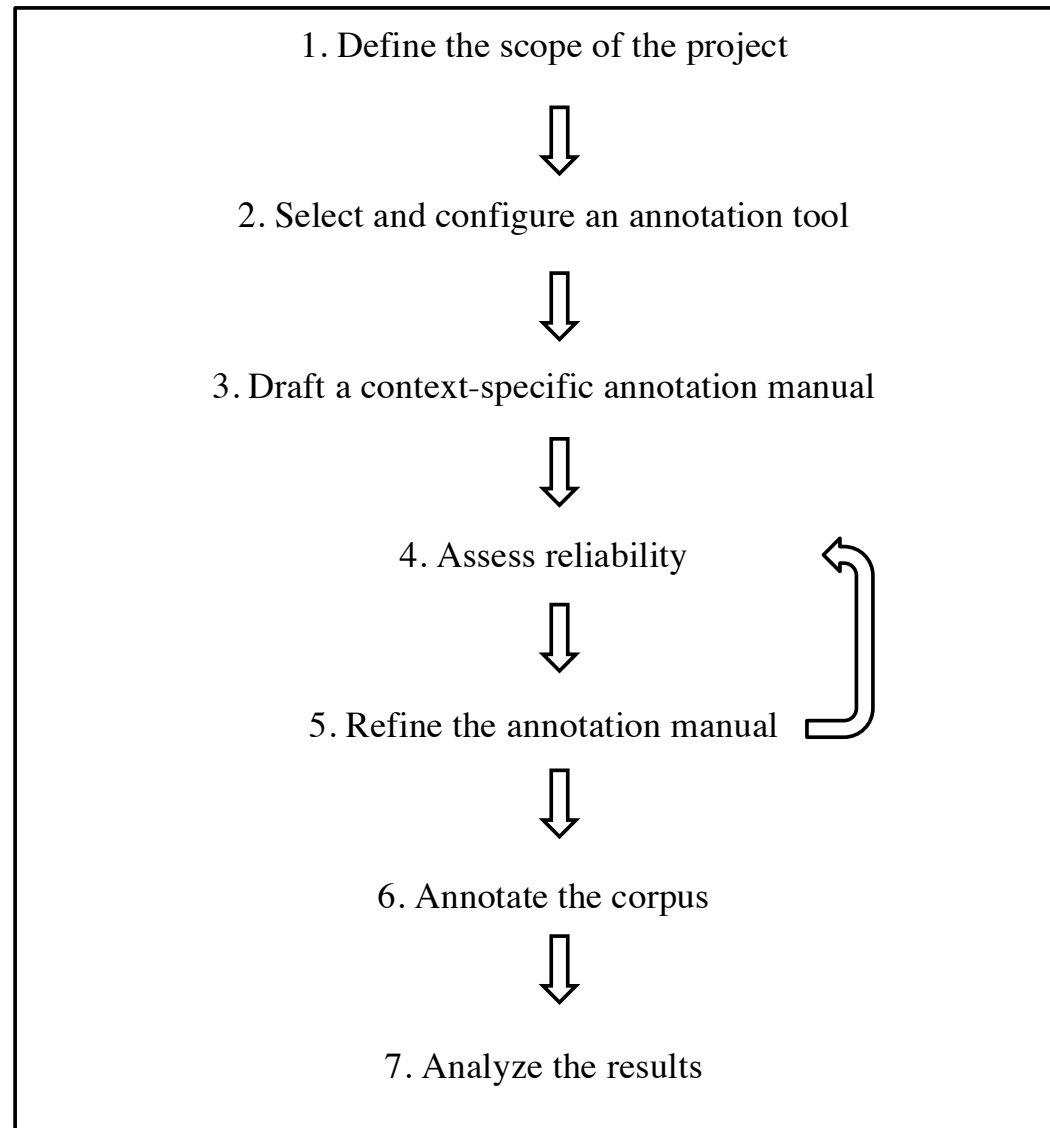

LUND UNIVERSITY

A step-wise method for annotating APPRAISAL

Annotating APPRAISAL in text and corpora: Challenges and strategies, Matteo Fuoli, Lund University, Sweden

LUND UNIVERSITY

General principles

LUND UNIVERSITY

- PRINCIPLE 1. All choices should be accounted for
- PRINCIPLE 2. The annotation guidelines should be tested and refined until maximum reliability is achieved
- PRINCIPLE 3. Reliability should always be assessed, and reliability scores reported and discussed

Step 1: Define the scope of the project

LUND UNIVERSITY

- Create a preliminary version of the coding scheme
 - categories should be chosen based on the research question(s)
 - not all APPRAISAL categories necessarily need to be included
- Informally annotate random samples from the corpus
 - take note of any unexpectedly frequent or interesting phenomena
- Add or remove categories from the draft coding scheme

Preliminary list of the APPRAISAL categories and subcategories to be included in the annotation scheme

Step 2:

Choose and configure an annotation tool

LUND UNIVERSITY

- Several freeware programs are available (for a review, see O'Donnell 2014)
 - UAM CorpusTool (O'Donnell, 2008)
 - CAT annotation tool (Lenzi et al., 2012)

Step 3:

Draft a *context-specific* annotation manual

LUND UNIVERSITY

- The manual should (minimally) include
 - outline of the annotation scheme
 - context-specific category definitions
 - explicit rules for applying the definitions to the data set under study
 - illustrative examples

The manual should be **context-specific**: the definitions and guidelines should be shaped around the specific characteristics of the texts to be annotated

Step 4:

Assess reliability

LUND UNIVERSITY

- To assess *test-retest reliability*:
 - annotate a random sample from the corpus twice, allowing some time between the two sessions
 - compare the annotations and calculate *intra*-coder agreement
- To assess *interrater reliability*:
 - annotate a random sample from the corpus
 - ask one or more other people to annotate the same data independently, following the guidelines specified in the annotation manual
 - compare the annotations and calculate *inter*-coder agreement

Step 5: Refine the annotation manual

LUND UNIVERSITY

- The results of the tests should be used to improve and refine the annotation guidelines as to optimize their robustness and clarity
- Reliability should be tested again, and the guidelines refined, until a satisfactory and/or stable level of agreement has been reached

4. Assess reliability

5. Refine the annotation manual

Step 6:

Annotate the corpus

LUND UNIVERSITY

- This task can be performed by one or more people, provided that interrater reliability is high
- Steps should be taken to minimize fatigue and cognitive load, which may negatively affect consistency
 - reviewing each text multiple times can contribute to achieving higher internal consistency

Step 7:

Analyze the results

LUND UNIVERSITY

- Once the corpus has been fully annotated, the data can be analyzed using both quantitative and qualitative techniques
- Quantitative analysis may be carried by simply counting and comparing the frequency of APPRAISAL categories across texts, but also using more sophisticated multifactorial techniques (see, e.g. Divjak, 2006; Geeraerts et al., 1994; Glynn, 2009; Gries, 1999)

Conclusion

LUND UNIVERSITY

- Practical solutions to the problem of subjectivity, which may hinder the reliability and replicability of analyses and have a major impact on the results
- By creating explicit and detailed annotation guidelines and refining them until optimal reliability is reached, the subjectivity involved in annotating APPRAISAL is not eliminated, but ‘tamed’ and controlled for, to the maximum extent possible

Limitations

LUND UNIVERSITY

- It is comparatively more time consuming than a more informal approach to manual annotation
- It may be better suited to quantitative than qualitative analysis
 - more coarse-grained and rigid than the qualitative, interpretive approach adopted by many scholars working with the APPRAISAL framework (e.g. Macken-Horarik and Isaac, 2014)
 - complementary approaches?
- General criteria and standard thresholds for reliability have not been established yet for the task of annotating APPRAISAL, so it is unclear when an analysis can be considered reliable *enough*
