

ENTOMATIC

Novel automatic and stand-alone integrated pest management tool for remote count and bioacoustic identification of the Olive Fruit Fly (*Bactrocera oleae*) in the field

This project has received funding from the European Union's Seventh Framework Programme for research, technological development and demonstration under grant agreement no 605073.

What is ENTOMATIC?

Try to improve the monitoring systems against the olive fruit *Bactrocera Oleae*, with estimated losses of 600€/ha.

What are the nowadays methods?

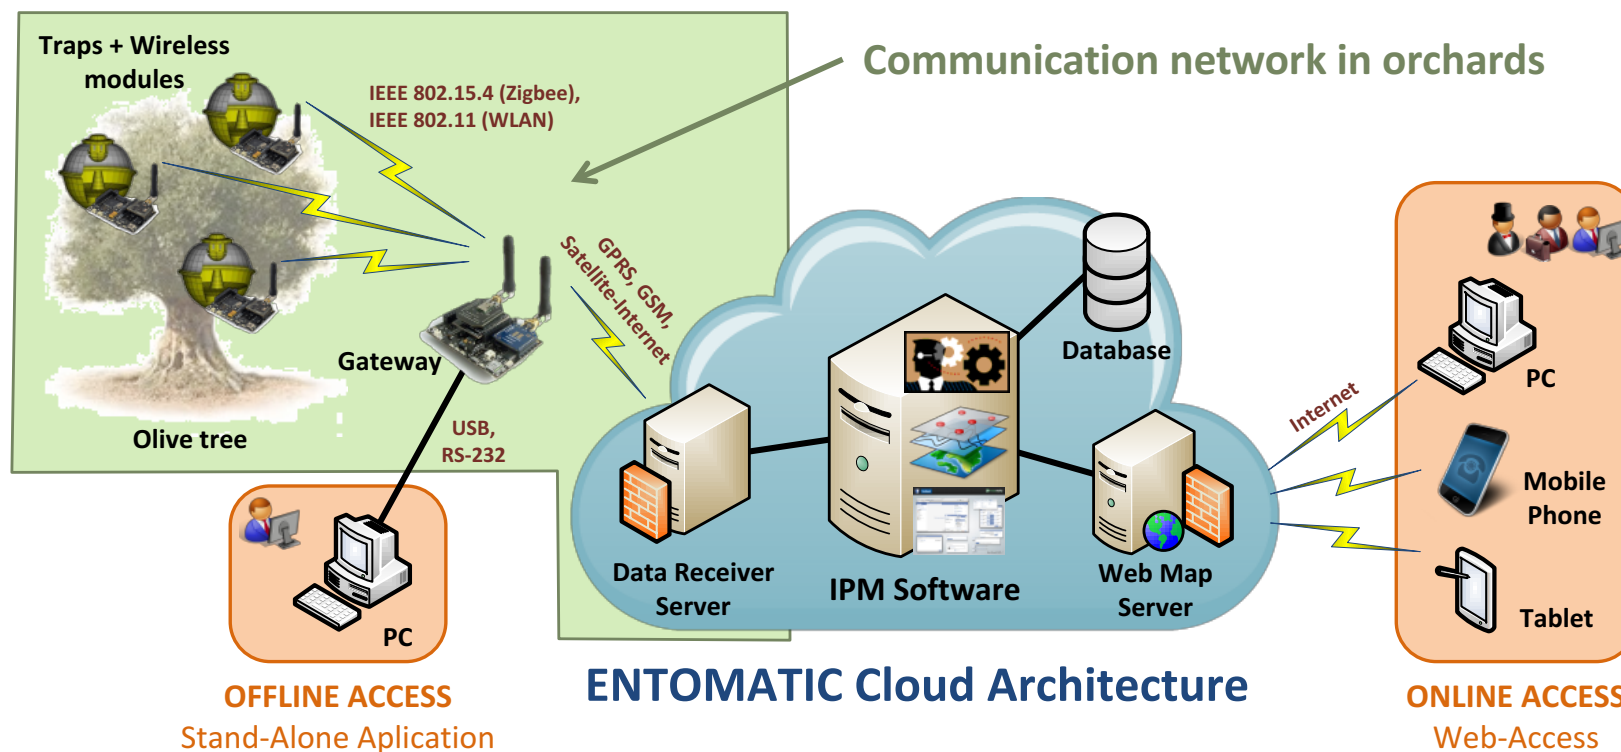

Different kind of traps and attractants with manual counting.

How ENTOMATIC will improve these systems?

ENTOMATIC wants to offer an Integrated Pest Management (IPM), based on a trap with automatic counting.

See our video in our youtube channel: <https://www.youtube.com/watch?v=6ZDE3rrjt0&t=27s>

What is ENTOMATIC offering?

Three novelties are being developed:

- A bioacoustic sensor to automatically count the olive fruit fly.
- Design of a communication wireless network
- Design fo a data base of control and management of plagues, with a recommendation and prediction system of the plague

Recommendation system

The IPM system(Integrated Pest Management) is based on es SDSS (Spatial Decision Support System).

It has three main parts:

- 1.- The spring onset model.
- 2.- The control decision tree.
- 3.- Analysis on the ENTOMATIC web app.

How to install the trap?

Autonomous version of the trap:

- 1.- Place the trap at the olive tree.
- 2.- Press the red button outside the trap. You will hear a beep.
- 3.- Wait until you hear two more beeps. This second beep indicates that the trap has established a connection with the server.

See our video in our youtube channel: <https://www.youtube.com/watch?v=53-LqpSsFYU>

¿Como instalar la trampa?

Meshed version:

Gateway connection

- 1.- Press the right button and then wait until the blue led is on.
- 2.- Press the left button and then wait until the green led is on .
- 3.- The gateway is ready to look for traps.

Paso 1

Paso 2

¿Como instalar la trampa?

Meshed version:

Trap connection

1.- Place the trap at the olive tree. Press the red button outside the trap. You will hear a beep. Wait until you hear two more beeps. Now the trap is ready.

2.- Press the right button of the radio module placed inside the trap and wait until the green led is on.

3.- The trap is now ready.

Administration

Each user is assigned to an organization.

Once a user has logged in, it can visualize its associated traps and the last data.

See our video in our youtube channel:

Pest Management

This section shows the recommendations generated by the designed SDSS.

The system automatically generates recommendations based on the data from the traps and the historical data.

Each user can also introduce the actions performed, such as, spraying performed.

➤ Pest Management

Recommendations				Download table as CSV
Date	Type	Comment	Orchard	
22-07-2016	Spraying	Olive fly threshold exceeded	East	

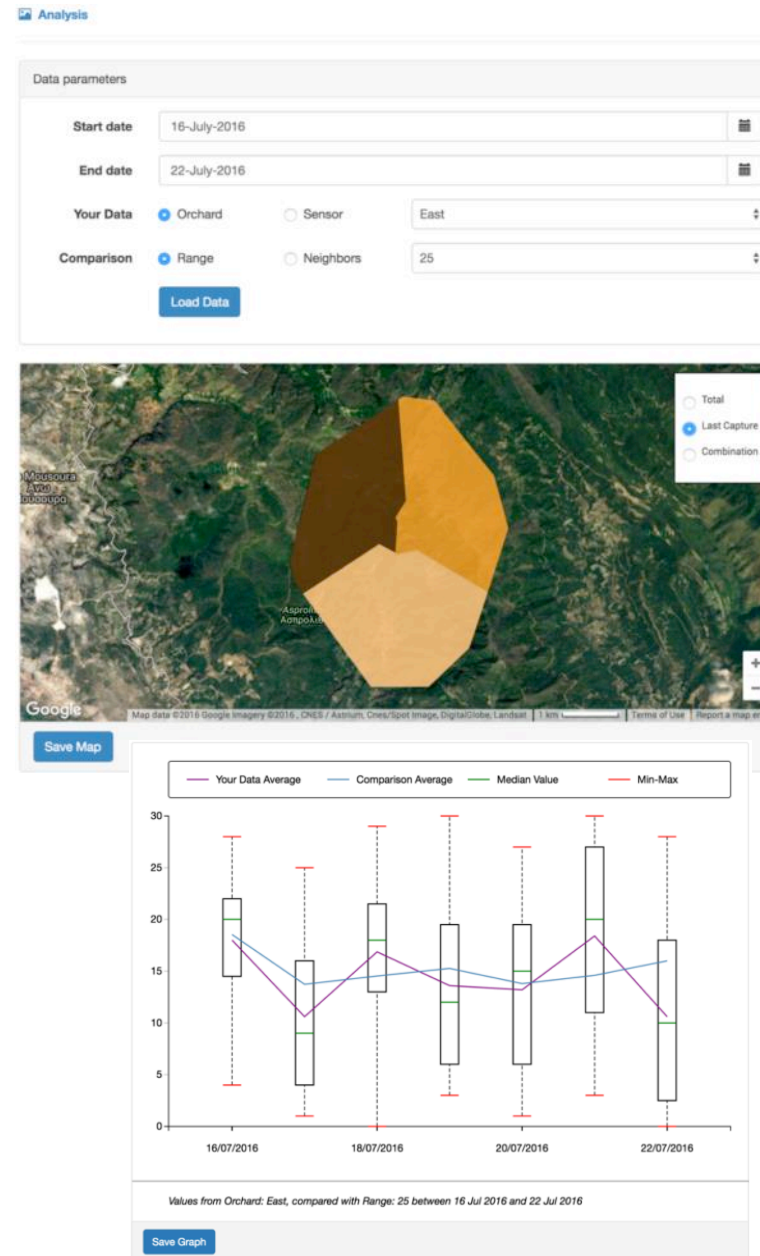

Control Actions					Download table as CSV

					Create new

Analysis

This section offers the visualization of data during a period of time from an specific trap or an orchard. It offers the possibility of comparing data with nearest orchards.

The map shows the measurements performed by sensors and the graphics shows the measurements and the comparative selected.

Network Performance

In the network performance page users can monitor the status of their sensors.

All the alarms that a user sets, such as, battery level, temperature level above a threshold, ...
