

Grigoris Panoutsopoulos is a post-doctoral researcher at the Institut d'Història de la Ciència, Universitat Autònoma de Barcelona. He is currently engaged in the ERC-funded project "CLIMASAT: Remote-sensing Satellite Data and the Formation of Global Climate in Europe, 1980s-2000s." Grigoris obtained a B.Sc. in Physics, an M.A. in History and Philosophy of Science and Technology, and a PhD in History of Science from the University of Athens. His doctoral dissertation, titled "Planning CERN's Large Hadron Collider: An Entanglement of Physics, Technology, and Diplomacy," demonstrates a deep understanding of the intricate connections between Big Science infrastructures, industry, and politics. Grigoris has a wide array of research interests, including science diplomacy, the material culture of science, the history of Big Science, the nexus between European integration and scientific networks, climate and weather data, and the history of European satellite systems. With the support of several fellowships and grants, he has presented his research at international conferences and has contributed articles to peer-reviewed journals and edited volumes.
